

Sliding Gate Measurements

MEASUREMENTS

* Required

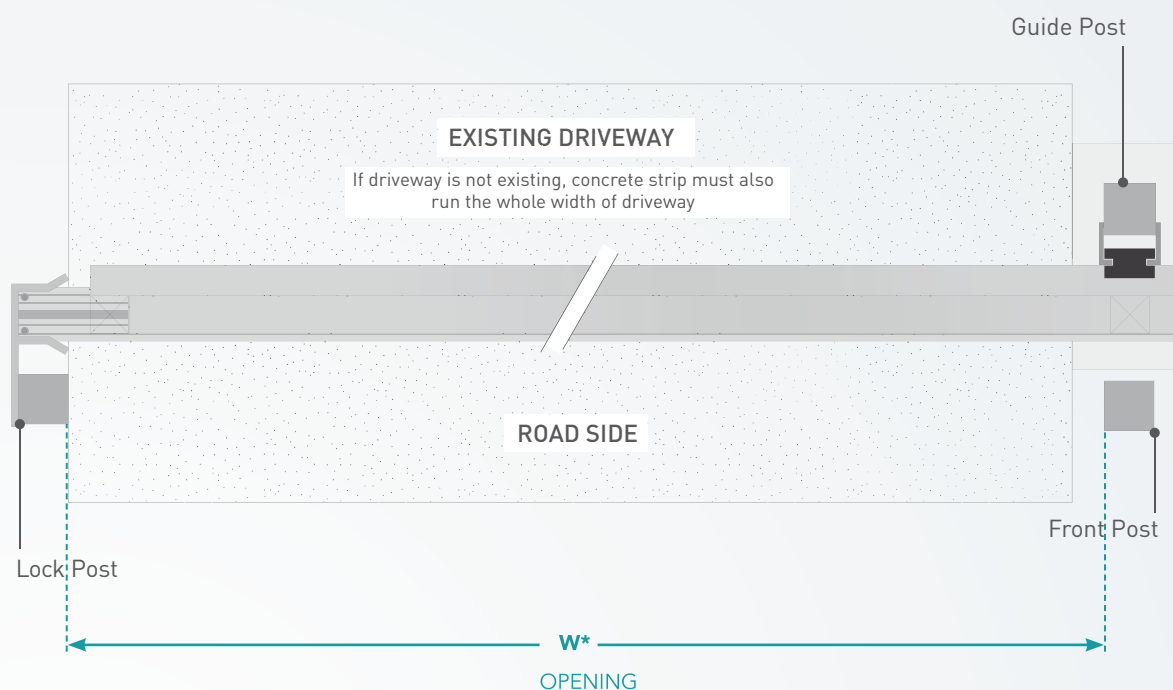

Please provide all measurements in Millimetres.

Please measure from **GROUND** level to your desired **finished height**.

H

Please measure the desired **OPENING** (length) of your gate.

L

HEIGHT (H*)

Please measure from ground level to your desired finished height.

We will deduct 35mm from this height to allow for the slight elevation that the wheels create when fitted to the 100mm x 50mm tube at the base of the gate.

LENGTH (W*)

Please measure the desired opening (length) of your gate.

When manufacturing your gate we will construct it with an additional 400mm length to ensure that it sits behind your front posts and between your front and guide posts during operation. The additional 400mm length on your gate will also allow you to mount a gear rack to the gate should you decide to automate your gate now or in the future.
